

Barracuda Content Shield

Cloud-Based Protection Against Web-Based Threats

MSP Solution

Barracuda Content Shield delivers a powerful web threat protection and content filtering solution for MSPs. Powered by Barracuda's extensive threat intelligence network, **Barracuda Content Shield** protects users from malicious sites and inappropriate content, helping to keep your customers' businesses safer and their employees more productive.

Robust DNS Filtering

DNS filtering provides protection from online threats such as viruses, malware, ransomware, phishing attacks, and botnets by blocking endpoint communication to websites that host malicious content. Barracuda Content Shield provides agentless DNS protection for all devices that sit behind your customers' router or firewall — which is critical as IoT devices become more common in today's workplaces. By enforcing policy at the DNS level, you block access to the sites before that connection is made, preventing dangerous communication between endpoint and website.

Real-time Threat Intelligence

Content Shield leverages Barracuda's powerful threat intelligence network, which combines data collected from multiple sources with advanced analysis and research to provide comprehensive, timely, up-to-date protection. Barracuda collects emails, domains, URLs, binaries and other threat data from tens of thousands of honeypots located in more than 100 countries and an extensive web crawler network. This is supplemented by data contributions from more than 180,000 collection points across several types of organizations. This allows Barracuda to leverage threat data across multiple vectors and rapidly respond to modern, aggressive web-based attacks. For example, Content Shield benefits from malicious domain data that is gathered through email submissions from Barracuda Email Security customers.

Centralized Management & Comprehensive Reporting

Administrators are kept informed on the status of each of their customers and can implement centrally defined protection and content filtering rules for every location. Furthermore, the integrated reporting functionality provides instant alerts of malicious threats and customizable reports that provide comprehensive views of issues in your customers' environments.

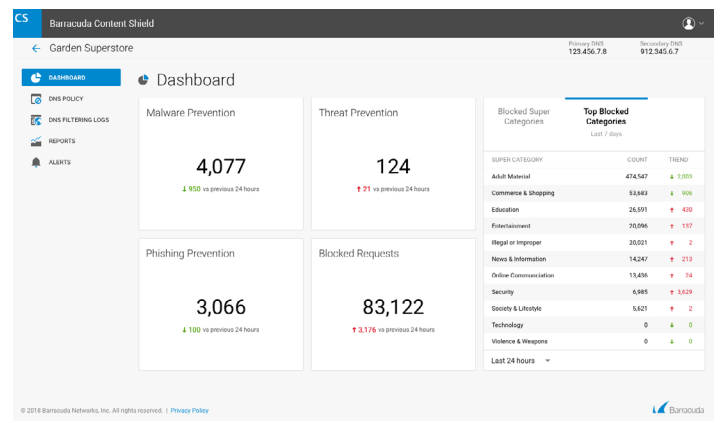

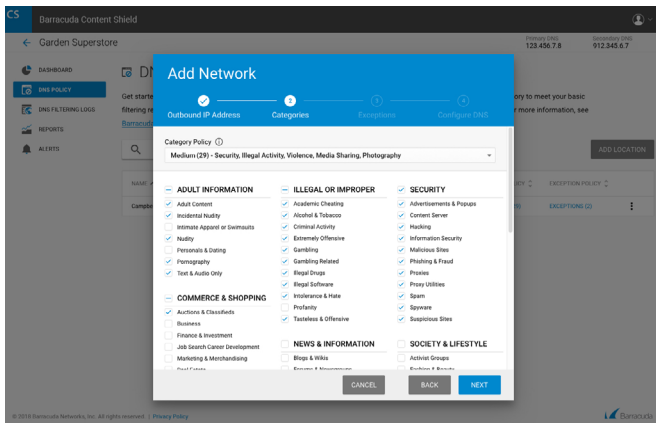

Policy Enforcement

Content Shield provides visibility into customer web activity while enforcing access policies across all users and devices. With more than 90 URL categories, Content Shield does more than protect your customers from malicious websites; it also ensures that you're protecting their employees from accessing sites that would violate company policy, norms, and standards.

Easy-to-Use Web Security Designed for MSPs

- Provides web security and content filtering configured and managed in the cloud
- Blocks malicious sites before connection is established
- Helps enforce customers' company policies by restricting inappropriate web browsing
- Offers customizable protection levels and templates that can be reused
- Set up in less than a minute; no software or hardware to install

Key Features

Overall Solution

- Multi-tenant capabilities
- Easy configuration
- Protects all devices in network
- Powered by Barracuda's real-time threat intelligence network
- Fully customizable block pages
- Pre-configured policies (high, medium, and low filtering) for quick setup
- Customizable templates that can be reused easily
- Optimizes bandwidth by preventing access to non-work-related sites (streaming media, gaming, etc.)

Alerts & Reporting

- Real-time alerts to MSP and end customer about malicious detection
- Generate white-labeled reports on threats blocked and destinations blocked
- Productivity reports highlighting most common domain categories visited
- Reports can be exported in PDF or CSV format

Administration Models

- Cloud GUI-based access
- Centralized policy setting and management for exceptions

Dashboard Monitoring

- Overview of the number of blocked web threats, malware and phishing
- Overview of blocked requests, broken down by category or super category
- Quick insight into trends over a customizable time period

About Barracuda MSP

As the MSP-dedicated business unit of Barracuda Networks, Barracuda MSP enables IT managed service providers to offer multi-layered security and data protection services to their customers through our award-winning products and purpose-built MSP platform. Barracuda MSP's partner-first approach focuses on providing enablement resources, channel expertise, and robust, scalable MSP solutions designed around the way managed service providers create solutions and do business.
